Grain Cleaner
Models 360 & 480

Saves you money four different ways.

1. Pay for your cleaner through reduced dockage.

2. Increase profits by reduced shipping costs.

Every bushel of dockage you ship costs you money. 4% dockage means that for every 500 bushel truckload, you pay to ship 20 bushels of waste. By cleaning your grain you not only eliminate that waste, but can utilize it by using the screenings for feed.

3. Quicker drying

The cleaner the grain, the faster it dries. That means you save time, fuel and money.

4. Reduced storage space

Even 4% trash and fines in a 10,000 bushel bin adds up to 400 bushels of wasted space. Space you could be using to store profitable, clean grain.

Choose from two models

MODEL 480 HIGH CAPACITY

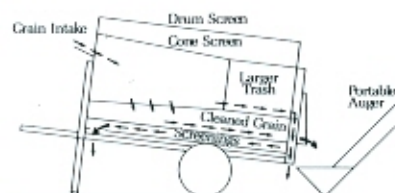

Model 480 handles up to 2,500 bushels per hour depending on moisture content and the amount of dockage. Its high capacity is a result of a two stage screening process and a large 48" diameter drum.

Simple set up

15" wheels and a full frame transport make the 480 easy to move. A removable intake auger and a hand-operated jack lets you adjust the cleaner for operation in the field.

Power

The 480 runs on a standard 3 hp. electric motor.

MODEL 480

Quality that lasts

Sealed bearings. High grade steel and oven-baked paint. Together with a solid 1-1/2" centre shaft and 3/16" formed channel frame, they guarantee rugged, reliable operation for years to come. You'll find the same quality in our smaller 360 model cleaner.

MODEL 360. Economical

Handles up to 1000 bushels per hour. The 360 also uses two stage screening. Trash and fines are discharged onto the ground while cleaned grain comes out a chute for convenient loading.

Power

The 360 comes with pulleys and adjustable mounts designed to fit most 1 hp. motors.

Easy to move

Lightweight and compact.

Convenient options

- Model 360 is available with a 6" intake auger for easy loading.
- Model 480 features an available trash pan for easy screenings collection. Fines and large trash are discharged at separate outlets.

Cleaner grain means greater profits

No matter what size you need, a Farm King Grain Cleaner will do the job quickly and economically. You'll save time, money and storage space.

Equipment shown here may be changed at any time without notice or obligation.

Built for the long run.

The first Farm King equipment rolled off the production line back in 1932. Since that day, we've produced thousands of hard-working, long-lasting farm machines. You'll find them on farms like yours from coast to coast and right next door. Like you, they put in a good day's work week after week and year after year.

We understand that farm equipment is a long term investment. That's why we build Farm King to last, and why some Farm King implements have been around longer than the farmers who use them.
